---

Attached photos documenting that the former Rebekah Colberg Sport Complex (future HeadStart Colaboracion I, II, and III) building is above ground surface and there is no contact with the soil.

The 'building' consists of 3 trailers joined inot one structure. There is no contact of soil and building. There is a gap of about 6" to 18" underneath.

Do we still need to collect the samples? Take a look at the photos taken by Jeff.
